J.Barnsley Cranes Ltd is recognised as one of the UK’s leading crane manufacturers. We specialise in explosion-proof cranes, and explosion-proof crane equipment for the petrochemical and pharmaceutical industries. Some 80 per cent of J.Barnsley orders are for the design and manufacture of EX overhead traveling cranes and EX hoists for the oil and gas industry. The remaining 20 per cent of its business is for the design and manufacture of cranes for general industrial use including water treatment plants and ship’s cranes for the offshore / marine industry.

Part of the secret to JBC’s success has been the decision to concentrate on providing quality, personal service; a commitment to deadlines and budgets; and a willingness to go anywhere in the world to meet existing and potential new customers.

Overseas, J.Barnsley Crane’s Middle East office in Abu Dubai continues to go from strength to strength and is enabling the company to capitalise on increasing demand for crane work from this part of the world.
J.Barnsley cranes are designed at our on-site crane design offices. We have a specialist crane Design & Engineering department utilising the latest CAD equipment. Our qualified and professional engineers have vast experience of crane design and innovation in order to get the right crane solution to meet our customers needs.

Our quality management system is approved by Lloyds Register in accordance with ISO 9001:2000. This is evidenced by our ISO 9001 certificate available to view in our resources section. The quality management system is applicable to: Design and Manufacture of Cranes and Material Handling Equipment. Management of associated site activities.

Our crane documentation department has great experience in the preparation of crane documents, in particular special requirements for crane documents to meet GOST requirements for Russia and Kazakhstan, CSA requirements for Canada as well as ENACT/DPP requirements for cranes being exported to Algeria.
All J.Barnsley cranes are manufactured at our workshops located in the West Midlands region of the U.K. We have a specialist crane manufacturing area of 32,000 ft2 which employs the latest crane manufacturing techniques.

We have a dedicated, skilled and experienced workforce who ensure our explosion proof cranes and materials handling equipment are manufactured to the highest standards. J.Barnsley also utilise CAM technologies.
J. Barnsley Cranes install cranes throughout the world. Our qualified and professional engineers have vast experience of crane installation in order to get the right solution to meet our customers needs.

J. Barnsley also carry out surveys on behalf of clients all over the world both onshore and offshore. By carrying out these surveys the client can be assured that the proposed crane/hoist solution will be fit for purpose and will ensure that the subsequent installation will go as smoothly as possible.
The history of J.Barnsley Cranes Ltd can be traced back to 1809 when it was established as a traditional Black Country engineering company. During these early years its foundry, listed variously as being based in Cradley Heath and Netherton in England, UK, produced a wide range of products including the Jews or Jaws harp.
